**Powerful Satellite Solutions for
End-to-End Global Communications**

From remote islands to war zones around the globe, UltiSat specializes in rugged, robust, and reliable communications.

PROVIDING POWERFUL, SECURE, and reliable satellite communications, UltiSat is a world leader in delivering broadband networking, corporate data, and digital telephony to extreme and remote locations.

Specializing in turnkey network solutions, UltiSat offers robust managed networks via its VIPnet service. From start to finish, experienced engineers, networking experts, and operations professionals bring added value to every network.

Their proactive use of network and bandwidth optimization, compression, accelerator, and network techniques, as well as ongoing performance measurements, diagnostics, and application-layer efficiencies, ensure productive and cost-effective networks.

UltiSat's commitment to superior customer service begins immediately. Each client is assigned a dedicated program manager who oversees every detail of a network for the lifecycle of the project, acts as the client's advocate, and provides a single point of contact for the customer.

ViPnet's turnkey service provides a one-stop shop where UltiSat is responsible for all elements including:

- Network design
- Engineering
- Hardware
- Satellite and terrestrial provisioning
- Regulatory and licensing services
- Global installation
- Network support
- Operations and maintenance

Key UltiSat Benefits

- Truly global networking
- Client-focused program management
- Decades of experience in designing, building, and operating custom networks
- Technology to IP-enable legacy networks
- Extensive regulatory, host-nation approvals, and licensing expertise.
- Support on any land mass, island, remote or harsh territory, and maritime vessels
- 24/7 network operations.
- Vendor agnostic and sensitive to customer choice
- Multilingual, 24/7 help desk
 - FCSA Bandwidth supplier
 - FCSA CS2-SB Supplier

UltiSat's Core Services

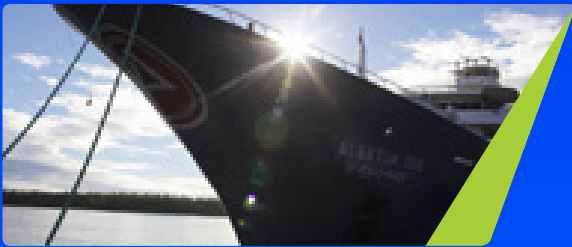

Teleport Services

Through its teleport in Denmark, facilities in the US, and Tier-1 multigigabit fiber links, UltiSat offers end-to-end services for C- and Ku-band satellites. Reliable, 24x7 network management, performance measurement, diagnostics, and multilingual help desk, combined with modern facilities, premium coverage, and system redundancy ensure trouble-free communications around the globe.

VIPnet: E2E Managed Networks

From mission-critical voice and data communications across continents to morale-boosting Internet connectivity in war zones, UltiSat offers the best options for private and secure satellite network services. UltiSat manages all services from design and installation to space-segment and fiber acquisition to ongoing monitoring and maintenance.

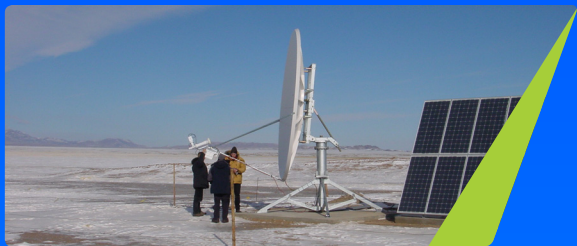

Mobile Satellite Systems

UltiSat provides global mobile satellite services that offer a wide range of voice, video, data, and IP services from Inmarsat, Iridium, and Thuraya. These small, lightweight, and powerful devices can be mounted on ships, airplanes and automobiles and also come as handsets that act like a regular phone

Scaleable Solutions

Whether you need a single satellite phone or a 1,000-site fixed VSAT network, UltiSat can provide you with both — and everything in between. UltiSat offers satphones, on-the-move IP terminals, manpacks, office-in-a-box, and fixed and flyaway VSATs so that you can take advantage of a one-stop shop for your entire satellite-communication needs.

Monitoring and Sensoring

For many organizations, the challenge of effectively monitoring, tracking, and controlling geographically dispersed sites can be daunting, even impossible where communications is inadequate or nonexistent. UltiSat addresses this challenge with its managed network service, VIPnet.

Internet and Broadband

No matter how poor the local infrastructure at your remote sites, UltiSat can keep your users morale high by providing reliable, broadband access to the public Internet and social networking, Internet apps, VoIP, and email.

Contract Vehicles

UltiSat offers a number of government-contract vehicles designed to offer easy access to satellite communications services and equipment. Under these contract vehicles, UltiSat provides a range of services that include:

- Broad-based engineering, management, design, implementation, and maintenance services.
- Specific satellite-communications services and equipment.
- Systems engineering.
- Research and development.
- Program management and analysis.
- Technical field assistance.
- Test and evaluation.
- Facilities management.

Custom Satellite Communications Solutions (CS2-SB)

UltiSat is a prime contractor under this vehicle, which allows both civilian and military government agencies to acquire professional satellite engineering services and build custom end-to-end satellite solutions with small business industry partners.

Schedule 70 (Contract number GS-35F-0068Y)

Schedule 70 is a long-term contract issued by the U.S. General Services Administration (GSA) and signifies that the GSA has determined that the vendor's pricing is fair and reasonable and the vendor is in compliance with all applicable laws and regulations. UltiSat offers the following:

- SIN 132-54: Commercial Satellite Communications (COMSATCOM) Transponded Capacity
- SIN 132-55: COMSATCOM Subscription Services.
- SIN 132-8: Purchase of new equipment

Purchasing from preapproved vendors such as UltiSat allows agencies to receive high-quality satellite goods and services as well as get small-business credits.

Flexible Choices

UltiSat recognizes that every network has unique requirements and its vendor-agnostic approach ensures that each customer gets the specific platforms and technology to meet specific network requirements.

Technology Platforms

TDMA, SCPC, subscription services, and custom platforms.

Satellite Components

- C, Ku, Ka, and X bands
- Fixed or flyaway VSATs
- Point-to-point to global multipoint networks
- Mobile satellite services
