

Managed Networks for Global Special Operations Communications

When national security and lives are at risk, you **HAVE** to be confident that your communications will work to keep you secure.

Real-time transmission of voice, video, data, and IP traffic

Rapid response to changing needs and

Global coverage and field-service operations

Secure, Dedicated Connections.

Customized Managed Networks for Global Communications

No Matter What Your Mission, UltiSat will Keep the Lines of Communications Open

From training missions to operations at the highest security levels, UltiSat provides the United States Special Operations Command (USSOCOM) with a range of satellite-communication solutions to support its unique mission.

Leveraging its tried and tested global infrastructure, UltiSat offers a range of mobile, flyaway, and fixed satellite services.

UltiSat's turnkey solutions incorporate smart engineering, robust equipment, and premier operation and maintenance for the lifecycle of every mission.

Reliable Networks for Critical Communications

Unconventional and high-risk missions in harsh, remote, and dangerous conditions are core to the special-operations mandate. UltiSat's managed service, VIPnet, provides reliable, mobile, and easy-to-use two-way communications anywhere in the world.

From mercy missions in disaster zones to secret operations in austere regions, VIPnet offers worldwide coverage and premier customer care wherever you have to operate.

Superior Service. Global Access.

CUSTOM NETWORKS. With significant past performance in special-ops networks, UltiSat can find you the right answer for your requirements. From repurposing existing equipment to establishing wide-area networks for field operations to modern communications on the move (COTM), UltiSat designs innovative and efficient solutions for command and control (C2) purposes and in-theater tactical networks.

RAPID RESPONSE. Key to UltiSat's special-operations expertise is the speed at which our global engineering and operations staff can provision and execute tactical

transport services. From order to operations, UltiSat can provide space, equipment, network design, implementation, and ongoing operations in as little as 4 hours.

PROCUREMENT. UltiSat can move quickly to execute prime and subcontracting projects under its DCAA-approved accounting systems, which are in full compliance with Federal Acquisition Regulations. In addition, UltiSat offers its services on the US federal government's two leading SATCOM contract vehicles:

FCSA Satellite Communications (SATCOM) Solutions — Small Business (CS2-SB)

Customized, end-to-end, professional satellite engineering services

IT Schedule 70 Contract

This vehicle is also accessible to state and local governments.

- SIN 132-54: Tranded Services
- SIN 132-55: Subscription Services
- SIN 132-8: Equipment
